AlcoSense®

STEALTH

Sleek, small and accurate.

The AlcoSense® Stealth was created specifically for today's market, combining powerful technologies with a stylish and lightweight design. It boasts an electrochemical fuel cell sensor, for high accuracy and reliability, while maintaining its classy appeal. Keep it in your pocket, handbag or car glove box, just don't confuse it with your mobile phone!

Breathalyser Specifications

Indication of %BAC	0.000% BAC to 0.400% BAC
Accuracy	+/- 0.005 at 0.100% BAC
Warm-up Time	Within 10 seconds
Response Time	Within 10 seconds
Recycle Time	10 seconds
Mouthpiece	5 mouthpieces supplied
Sensor Type	Electrochemical fuel cell sensor
Power Supply	2 x AAA alkaline batteries
Weight	100g including batteries
Ambient Conditions	Operation: -5 to 40 °C Storage: 0 to 50 °C
Dimensions (mm)	106 high x 50 wide x 20 deep
Remarks	<ul style="list-style-type: none">• Auto power off• Flow error technology• 3 decimal reading
Calibration	Recommended every 6 months or 500 tests
Accreditation	<ul style="list-style-type: none">• Australian Standard AS3547 Type 2• DOT Approval

Facts

Drinking impairs a number of key sensory systems in the body including:

- Vision
- The ability to track changing conditions
- Perception - sensory relationships (touch, sight, sound)
- Concentration - effects our ability to focus on driving
- Psychomotor skills- resulting in slower reaction times

As a Blood Alcohol Concentration (BAC) rises, so does the risk of being involved in a vehicle crash or a workplace accident.

0.05 = double the risk

0.08 = 7 times the risk

0.15 = 25 times the risk

The way to avoid these is simply not to drive if you feel tired and know your concentration is not at its best. Estimating your BAC is often inaccurate so use AlcoSense® Stealth Breathalyser to get instant, accurate indication of your BAC.
