LOCAL KNOWLEDGE  SAFER WORKERS

Welcome

to SafetyQuip and Edition 9.1 of the
SafetyQuip Products and Services Catalogue.

**Proudly Australian
Owned & Operated**

SafetyQuip is proudly an Australian Owned and Operated Franchise Business with locations around Australia. With over 28 years experience in the Safety and OHS Industry, our Franchise Partners, our customer focused employees and our dedicated National Support Team share the same vision *“To ensure that you and your employees go home safely everyday”*.

SafetyQuip began in 1992 with one location on the Sunshine Coast and a mobile SafetyQuip Van. In 2019, three of our Franchisees purchased the business from the retiring founder. We believe in the philosophy, business and the products and services provided to our customers. Today we have grown to proudly service all of Australia.

We are proud to be a trusted supplier to so many clients around Australia and regard it a privilege to play a role in assisting you to maintain a safe yet productive workplace.

Our section lead-in pages are devoted to providing essential background information on each section topic. Take some time to read them as we are sure they will supplement your OH&S knowledge.

SafetyQuip consistently invests in the training of our team members to ensure that we live up to being *‘The Safety Professionals’*.

SafetyQuip Customer Service Team Members undergo an intensive training program as part of our onboarding process. It assures us and you, that when you purchase from SafetyQuip you get much more than just a product in a box. The quality, service, advice and ongoing support we provide are critical components to our ongoing relationship with you and your business.

Our Safety Centres and Safety Vans – *“The Store that Comes to You”* are a winning combination that has serviced tens of thousands of our valued clients around Australia.

Finally, to all our valued clients around Australia, we thank you for your loyal support over the years. Without you, our vision would not have become what it is today.

SafetyQuip Capabilities

SALES AND SUPPLY

Pay no more (and often much less) for a range that includes all the top brands. New product demos, expert advice on tap and research for those special needs make SafetyQuip the one-stop shop for safety equipment and PPE compliance. Instant supply, invoicing and back ordering all right there on the spot – and it's all available now!

SafetyQuip is the local face of WHS. Local people who know your workplace and its needs, anchored by a national network with excellent supplier relationships, great IT, centralised tech support and proven business systems.

It's the kind of care and attention you only get when you're dealing with people who own and manage the business.

MOBILE

At whatever interval makes sense, a SafetyQuip Mobile Safety Shop will arrive at your doorstep carrying all your Safety and PPE needs.

All SafetyQuip Mobile Safety Shops are stocked with a broad range of PPE, Footwear and Site Safety Products, this is what makes us different from the rest.

You may choose to receive a scheduled visit and have your Safety needs supplied on the spot or have your special requirements responded to as and when they are needed – such as Workwear Fit outs, Replenishment of PPE Lockers or inspection of Spill Control Kits to name just a few of the ways SafetyQuip can service your business.

There are many ways our Mobile Safety Shops and fully trained Safety Professionals can assist you to stay on top of your Workplace Health and Safety requirements and keep your workplace safe!

SafetyQuip Mobile Safety Shop – The Store that comes to You.

IN STORE / DISTRIBUTION

Should you need to call into our SafetyQuip Safety Shop, our Safety Professionals are here to help.

SafetyQuip trained Customer Service team are able to assist with product choice and selection and provide advice on the use and maintenance of the Safety products you require.

SafetyQuip Safety Shops also act as the service centre for our customers who place orders via phone, website and email. We ensure that your order is processed by Customer Service staff who have experience and knowledge of the products.

Getting your order correct and quickly delivered to you is our top priority.

Efficient over the counter assistance and prompt deliveries are all part of the SafetyQuip service.

ONLINE

SafetyQuip's online ordering option gives you full access to the complete range of personal protective equipment and site safety products.

From simply being able to browse the electronic catalogue right through to ordering the products you need, the SafetyQuip website is there to make life easy.

If you do not currently have an account with SafetyQuip, but are a regular purchaser of our products, you might like to contact your nearest SafetyQuip branch to discuss if opening an online account is the right option for you.

Our website also has some valuable workplace health and safety resources including references guides, videos and technical brochures to assist you further.

Huge range, top brands and reliable advice!

A Trusted Safety Supplier

What makes us credible?

SafetyQuip is an established part of the Industrial Safety Market with over 25 years of experience and knowledge, and counting. Our national network interacts with a broad range of industries and enables us to service multi-state customers with consistency and reliability. Customers have come to rely on the dependability and stability that the SafetyQuip business model offers.

SafetyQuip's unique combination of fulfilment options ensures that it has an edge in responsiveness and customer service that is widely valued and hard to beat in a market often devoid of the personal touch.

We understand that as a supplier of Personal Protective Equipment, Workwear and Site Safety Products, our customers depend on the advice, products and support services that we provide to enable them to meet their duty of care when implementing Risk Control Measures involving a PPE solution.

At SafetyQuip we work hard to deliver on our core premise of 'Local Knowledge - Safer Workers'. To ensure our national network executes effectively across all channels, we have in place a range of business support processes and procedures that provide our customers with the assurances that they are dealing with a credible supplier.

Here's a few of the Safety things that we think are important as a **SPECIALIST SAFETY SUPPLIER**:

- Standards are important, that's why at SafetyQuip we only supply products that meet Australian Standards or a relevant International Standard
- Our internal Learning Management System provides in-house Safety Training Modules for all levels of the SafetyQuip Team.
- We heavily focus on integrated Supplier Training with nationally selected Suppliers.
- When it comes to the selection, use and maintenance of Safety products, our customers have our full attention.
- Our Duty of Care to our customers will always come first

Full Scope Safety Professionals

SafetyQuip offers customers a full scope safety solution that covers workplace needs from head to toe and includes industrial safety & environmental requirements.

Leveraging well established long term supplier relationships, SafetyQuip offers a comprehensive range of leading brands to assist in selecting the best value 'fit-for-purpose' product solutions for all applications.

In conjunction with our nationally selected suppliers additional product support is offered via a range of services including:

- **Respirator fit testing**
- **Hearing fit testing**
- **Height Safety equipment inspection**
- **Spill control replenishment**
- **Signage surveys**
- **Workwear & footwear services**

Your local SafetyQuip store can discuss any needs you may have and provide the most effective and economical solution.

Our local knowledge and staff training enables our sales people to advise customers on correct product choices so that the intended level of protection is achieved.

Compliance

With thousands of lines available, the backup of a national network and service provided by local people who are trained to assist in solving your workplace safety issues, compliance becomes less of a problem.

In fact, if you are worried about Compliance - just ask. Anything we can't answer, our National Support Team can. Or we can organise for economical OH&S Support to be provided by certified specialists.

The SafetyQuip catalogue also provides some useful 'Risk Assessment' background information and 'Safety Tips' for each category of PPE. Refer to our 'A Safe Place To Work' page that follows for some important background information.

Why take the risk when SafetyQuip makes compliance easy.

A Safe Place To Work

CODES OF PRACTICE

The National Workplace Health and Safety (WHS) Act and Regulations include Codes of Practice describing workplace duty of care responsibilities. Some Codes of Practice are specific to a particular work risk (refer to www.safeworkaustralia.gov.au).

One code is devoted to the management of workplace risk. Any person conducting a business or a business undertaking (PCBU - described in the Safe Work Australia website) is expected to conduct their responsibilities in a format that ensures every worker has a safe place of work. The National Codes of Practice help you make informed decisions in the assessment of hazards and the application and management of control measures.

MANAGEMENT COMMITMENT

The Code of Practice “How to Manage Health and Safety Risks” now requires a manager to consult with employees on workplace health and safety issues in which they are involved. If workers are represented by a Safety Representative then that representative must be included in the consultation process.

IMPORTANT TERMS

Hazard – A hazard is a work practice that has the potential to cause harm. Ask yourself the most unlikely “what if” questions when observing workplace and work practices. Under present legislation, hazards now include workplace bullying and violence, poor workplace design, inadequate systems controls or the lack of or no procedures of operation.

Risk – Is an assessment of the likelihood that a specific hazard will produce harmful consequences. A risk assessment should determine a time frame in which to apply control measures, e.g. an immediate machine shutdown.

Risk Control – Risk control is normally a two-step process:

- Eliminate the risk as far as reasonably practicable. Eliminating the hazard to eliminate the risk is the highest ideal.
- Put in place reasonable and practicable control measures that produce a downgrading of the hazard to a lower risk category.

CONTROL MEASURES

Selecting appropriate risk control measures can be a difficult task for persons in charge of a business or undertaking (PCBU). It is important you maintain a structured approach to help eliminate or minimise risks identified in your workplace. For the most effective way to control risks, aim to implement higher stages from the table below, before considering the lower stages.

This table explains how each stage should be implemented:

STAGE	HOW TO IMPLEMENT
Stage 1 - Elimination	Remove the risk of exposure to the hazard completely.
Stage 2 - Substitution	Control the risk by substituting it with a less hazardous or non-hazardous alternative.
Stage 3 - Isolation	Reduce the risk by enclosing or isolating it.
Stage 4 - Engineering	Put engineering controls in place to eliminate or reduce the risk.
Stage 5 - Administration	Implement administrative controls to minimise the risk.
Stage 6 - Personal protective equipment (PPE)	Require your workers to wear PPE (e.g. safety goggles, gloves, iridescent vests and safety boots, while in the vicinity of the risk).

CODES OF PRACTICE AND PPE

WH&S legislation specifies that PPE is only to be selected for worker protection when all higher ranking control measures have been investigated and excluded or PPE is selected as a component of a higher ranked control measure. Under WH&S Regulations a person in charge of a workplace must:

- Select the equipment in accordance with any technical standard published by Safe Work Australia e.g. a relevant Code of Practice.
- The PPE put in place to control a risk is maintained, replaced or tested in order to continue to function as a suitable risk control measure. Furthermore there is an expectation that the quality or performance criteria of that PPE is not altered or downgraded throughout the period of use.
- Ensure that all users of PPE are trained in the use, maintenance, function and performance of each item of PPE specific to each job application.
- Demonstrate ongoing supervision in the correct use of PPE, e.g. toolbox talks, in-house audits, safety committee meeting minutes.

HEAD PROTECTION

APPLICATION

The use of helmets will include the need to protect employees from exposure to falling objects, bumps, electrical contact, sun, heat and fire, low light risk and emergency situations.

RISK ASSESSMENT

The need to wear head protection should be established by conducting a risk assessment. Elimination or control of a hazard should be given first consideration. Key factors influencing a head protection risk assessment:

- The nature and location of the work
- Potential of falling objects
- Contact with fixed or protruding objects
- Contact with electrical hazards
- Exposure to heat, sun, wind, rain and chemicals
- The impact on hearing protection by head/face protection accessories
- Specialist fire & emergency rescue situations

The head comfort of workers exposed to **high temperatures/heat** is important. Ventilated, white safety helmets will provide better heat dissipation.

Hard hat reflective strips are available for **low light** working risks. The tape is available in curved and straight strips and coated in a safe and approved adhesive.

Emergency and Warden safety helmets must always have an

adjustable chin strap fitted. All are required to have the approved identification. The safety helmet colours for Emergency Warden positions are:

1. White - Chief Warden
2. White - Deputy Chief Warden
3. White - Communications Officer
4. Yellow - Area or Floor Warden
5. Red - Warden
6. Green - First Aid Officer - White Cross on a Green Square

Accessory options:

- Cap attachable earmuffs
- Face shield or welding shield
- Visor/muff combinations for brushcutting/chainsaw applications
- Wide brim for additional shade in hot climates
- Neck flaps for protection against weather, molten metal splash, hot substances etc.
- Chin straps

HELMET SERVICE LIFE & INSPECTION

Safety helmet shells generally have a working life of **3 years** from the date of issue. Internal headgear should be replaced every 2 years. Safety helmets and components should be inspected weekly for dents, cracks, scratches or other damage that may reduce the degree of safety originally provided. Helmets showing damage or deterioration to the shell should be immediately disposed of.

SAFETY TIPS

- Employees **MUST** be trained in the use and limitations of protective helmets.
- Mark the issue date on the label provided in the helmet.
- Do not place non-approved stickers on, or paint or mark the helmet with any kind of ink marker.
- Bump caps have no AS compliance but may comply with international bump cap standards.
- A safety helmet placed on the parcel shelf of a car becomes a missile in a collision.
- Do not use any solvent for helmet cleaning - warm soapy water only.
- Match same brand accessories to safety helmets wherever possible.

All workers should be trained in the correct use and maintenance of personal protective equipment.

EYE & FACE PROTECTION

APPLICATION

When engineering and administrative controls are unable to remove the potential for eye and/or face injuries, suitable PPE must be worn. This assessment must also apply to passers-by and nearby workers.

RISK ASSESSMENT

When determining a need for eye protection, carry out a risk assessment of the task to ensure that the correct specification for eye protection is chosen. Never assume that the present choice is the right one.

Consider:

- Prescription eyewear for workers with vision weaknesses. Be aware of the risk of reader inserts in standard protective eyewear ie. the capacity to distort walking vision eg. on stairs.
- Low, Medium, High and Extra High (switching work) energy impact risks.
- Chemical, microbiological, hot materials and cryogenic liquids (chin guard attachments are essential for splash risk). LPG re-gassing is a cryogenic liquid eye injury risk.
- Welding operations require careful risk assessment including protection for welder's assistants.
- Laser protection for Classes 3, 3A and 4 must comply with the laser manufacturer's recommendations.
- Provision of emergency eyewash and first aid. Refer to the Health & Hygiene and Site Safety sections of this catalogue.
- Eye Protection Signs conforming to AS 1319:1994 - Safety signs for the occupational environment.

AS/NZS 1337.1:2010 lists four impact ratings. These are Low, Medium, High and Extra High. Impact protection situations are listed in that standard. Extra High Impact rating visors must be used for electrical maintenance - refer page 57.

MARKING OF EYE PROTECTORS

In line with the proposed ISO standard, the following lens markings for Eye Protectors may apply:

TYPE OF LENS	LENS MARKING
Outdoor Use Untinted	"O"
Low Impact	"S" - optional
Medium Impact	"I" or "F"
High Impact	"V" or "B"
Extra High Impact	"A"
Splash Proof	"C" or "3"
Molten Metal	"M" or "9"
High Temperature	"H"

SAFETY PRESCRIPTION EYE PROTECTION

Amendments to AS/NZS 1337.6 Prescription Eye Protectors against Low and Medium Impact, state that prescription eye protection must be compliant with a standards testing protocol in order to be worn in the workplace. This standard now requires manufacturers of workplace prescription safety eyewear to be licensed.

SAFETY TIPS

- Spectacle arms can compromise hearing protection when ear muffs are worn.
- Eye protection may be compromised by respiratory protection. Check the two together.
- Grinding and cutting protection must include both a high impact face shield AND medium impact safety spectacles.
- Do not allow workers on site with non-compliant eyewear eg. fashion sunglasses.
- Ensure that a welding cover/chipping lens has a suitable impact rating.

All workers should be trained in the correct use and maintenance of personal protective equipment.

HEARING PROTECTION

APPLICATION

When higher ranking noise control measures are unable to reduce the exposure to noise **to or below the National Standard** (www.safeworkaustralia.gov.au), employees should be supplied with, and be trained on, the wearing and maintenance of effective personal hearing protectors.

RISK ASSESSMENT

The risk of over-exposure of workers to noise in a workplace must be assessed by conducting a **noise survey**. The purpose of a survey is to identify all work areas and work practices likely to expose workers to noise above the national 8 hour day standard (presently 85dB(A)) and must include work hour calculations if work hours exceed 8. The survey must also explain and record noise dose and identify peak noises.

A noise survey should audit the effectiveness of any existing measures and include recommendations that direct employers to measures that will reduce noise. Employers are required to provide appropriate PPE and train employees in the use and maintenance of personal hearing protectors.

When selecting hearing protectors the following must be considered:

- Weight and clamping force (for earmuffs) - refer to our quick reference guide at the end of this section.
- Suitability of protection for use and fit with other PPE such as helmets, spectacles, respirators etc.
- The inherent problems of comfort and supervising compliance.
- The interference of fit when wearing head clothing like hair nets, hoodies and beanies.

CLASSIFICATION TABLE

Hearing protectors are grouped into five classes that range from class 1 to class 5 based upon Australian Standards governed testing (Specified SLC 80, dB) as shown below:

SPECIFIED SLC80 FOR DETERMINATION OF CLASS		
Class	Specified SLC80, dB(A)	Effective Noise Range
1	10 - 13	90dB(A)
2	14 - 17	95dB(A)
3	18 - 21	100dB(A)
4	22 - 25	105dB(A)
5	26 or greater	110dB(A)

SLC80 (Sound Level Conversion) is a single number rating commonly used in Australia and New Zealand to compare the acoustic performance of hearing protectors. The subscript '80' indicates that in well-managed hearing protector programmes, the protection provided is expected to equal or exceed the SLC80 in 80% of protector-wearer noise spectrum combinations.

USEFUL REFERENCES

AS/NZS 1269.3:2005 Occupational noise management - hearing protector programme.

SAFETY TIPS

- Over-protection may cause wearers to remove hearing protection to communicate or miss warning sounds.
- Safety spectacle side arms and certain hair styles may affect the air seal of an earmuff.
- Replacement hygiene kits (ear cushions and foam inserts) will help maintain earmuff performance.
- Using earplugs in addition to earmuffs may add up to 3 decibels to the earmuff rating.
- Exposure to noise combined with certain chemicals absorbed into the blood stream will cause an ototoxic effect, accelerating noise induced hearing loss - wear protective gloves.
- Define extensive noise areas with appropriate signage

All workers should be trained in the correct use and maintenance of personal protective equipment.

RESPIRATORY PROTECTION

APPLICATION

An employer is required to demonstrate compliance to AS/NZS 1715 or any of the legislated Codes of Practice in terms of risk management. It is also an employer responsibility to ensure other means of hazard control have been investigated prior to introducing respiratory protection initiatives.

RISK ASSESSMENT

The AS/NZS 1715:2009 describes respiratory risk assessment along with a Respiratory Protection Programme and the appointment of a Programme Administrator where respiratory protective equipment (RPE) is required to be worn. Some of the risk assessment requirements are:

- Ensure the workplace is not a confined space. This can only be determined by measurement of the risk atmosphere for safe oxygen levels throughout the working period. Negative pressure respiratory protection cannot supplement oxygen.

FILTER CLASSES & IDENTIFICATION

TYPE	COLOUR	APPLICATION	PROTECTION LEVEL (NEGATIVE PRESSURE)*		WHEN TO CHANGE
			HALF FACE	FULL FACE	
PARTICLE FILTERS			For levels up to:		
P1	White	Mechanically generated particles	10 x WES	N/A	Particulate filters should be changed when unacceptable breathing resistance is experienced or in accordance with a locally specified change schedule.
P2	White	Mechanically/thermally generated particles	10 x WES	50 x WES	
P3	White	Toxic & mechanically/thermally generated particles	10 x WES	100 x WES	
GAS & VAPOUR FILTERS			Whichever level is lower of:		
A1	Brown	Organic gases/vapours with boiling points > 65°C	10 x WES or 1000ppm	50 x WES or 1000ppm	Charcoal filters should be changed when breakthrough/smell/taste is detected or in accordance with a locally specified change schedule.
A2	Brown	Organic gases/vapours with boiling points > 65°C	10 x WES or 1000ppm	100 x WES or 5000ppm	
AX	Brown	Organic gases/vapours with boiling points < 65°C	N/A	50 x WES or 5000ppm	
B1	Grey	Inorganic gases/vapours	10 x WES or 1000ppm	50 x WES or 1000ppm	
E1	Yellow	Acid gases	10 x WES or 1000ppm	50 x WES or 1000ppm	
K1	Green	Ammonia & ammonia derivatives	10 x WES or 300ppm	300ppm	Note: Ammonia has an IDLH value of 300ppm and filtering respirators should not be used above this concentration.

This guide is based on AS/NZ 1715:2009 with specific reference to tables 4.3, 4.4 and 4.5

WES = Workplace Exposure Standard - see Safework Australia website <http://hcis.safeworkaustralia.gov.au/ExposureStandards>

Additional filter types are available for specific chemicals.

Combination filters have the same limitations as for each component.

*Note: protection levels for PAPR and face/head top combinations may vary.

- Evaluate tasks to determine if RPE will compromise vision, communications or other PPE.
- The employer must provide training in the cleaning, safe use and limitations of RPE at the commencement of employment.
- The Programme Administrator must ensure a compliant fit test has been carried out for all users of RPE and maintain suitable records. The AS/NZS 1715:2009 describes both Qualitative and Quantitative fit test methods.

SAFETY TIPS

- Facial hair has the potential to compromise the face seal of respirators - being clean shaven is best!
- Consider the impacts of other forms of PPE.
- Keep RPE in optimum condition for best performance.
- Store RPE in a clean/dry condition and away from harmful atmospheres.
- Inspect RPE before use and check performance.

All workers should be trained in the correct use and maintenance of personal protective equipment.

RFX501 RETAINER

CODE	RF2125	RF2128	RF2138	RF5925	RF6051	RF6057	RF6059
TYPE	P2	GP2	GP2/GP3**	P2	A1	A1B1E1	A1B1E1K1
APPLICATION	Certain dusts, mists and fumes such as sanding, grinding, cutting, drilling metal, masonry, wood and concrete.	Welding fumes, ozone, polishing and grinding particles. Also for spraying pesticides or herbicides with vapour pressure <1.3 Pa @ 25°C.	Toxic particulates, nuisance level* acid gas and organic vapours with low vapour pressure.	Dusts and mists, including those containing oil. For use with the 6000 series cartridges. Requires RFX501 retainer (ordered separately).	Organic solvents (boiling point >65°C) eg. toluene and MEK. Also degreasing, mixing, using paint thinner, lacquers and glues.	Organic vapours (boiling point >65°C), inorganic & acid gases.	Multi-gas; Organic vapours (boiling point >65°C), inorganic & acid gases, ammonia, methylamine.
UOM	Pack/2	Pack/2	Pack/2	Box/5Pr	Pack/2	Pack/2	Pack/2
COLOUR							

* Not to be used when spraying isocyanate based paints.

* Nuisance levels are those levels below the Workplace Exposure Standards.

** Higher P3 protection factors only achieved with a 3M Full Face Respirator, otherwise P2 protection level when worn on a 3M Half Face Respirator.

3M respirators meet the performance requirements of AS/NZS 1716:2012

Secure Click™ HF-800SD Series Half Mask Reusable Respirator

- Next generation comfort, breathability and simplicity
- Patented silicone flex-joint face seal
- Unique filter click connection
- Dual-flow filters with 4 airflow paths
- Swept back filter design
- Speaking diaphragm
- Push button seal check

FM3 Promask PAPP Full Face Mask & Proflow SC 160 ReadyPak

- Slimline halo-butyl face piece with polycarbonate visor
- Approval rating PAPP P3
- ReadyPak includes:
 - FM3 Promask
 - Proflow SC 160 PAPP Unit
 - Battery and charger,
 - EPDM hose
 - Two Pro2000 P3 filters
 - Storage container
- Battery time is typically 6-7 hours for a single charge

Honeywell

BW™ ICON Four Gas Detector

- Fixed-life, 2-year, 4-gas detector for the gas hazards that workers face most often
- Simple icon display for gas levels/device status including 2 bell icons for gas alarms and indicators next to sensor for fast decision making
- Easy to use: one-button operation
- Small, lightweight and wearable
- The latest in low power LEL infrared technology with no sensor poisoning
- No service required: activate and use for two years
- Bluetooth included for ease of downloading and sending reports via the Safety Suite App
- 2 months of battery runtime on a 4.5-hour charge (up to 4 months if you turn off the detector at the end of each shift)
- Compatible with IntelliDoX instrument management system and Honeywell Device Configurator App

CODE	DESCRIPTION
RGMICONH	BW Icon (O ₂ , LEL IR, H ₂ S, CO) Yellow or Black
RGMICONS	BW Icon (O ₂ , LEL, H ₂ S, SO ₂) Yellow or Black

Honeywell

IntelliDoX Automated Instrument Management System

- Industry-leading fast bump test that eliminates bottlenecks, while avoiding costly purge cycles that waste gas
- Gangable up to five modules, each with its own LCD screen and keypad for independent operation
- Easy to connect via ethernet to a network
- USB port to easily configure dock module settings or retrieve data without network access
- Automated bump test and span calibration operation
- Device management with Honeywell Safety Suite
- Bump testing, calibration, configuration, and record-keeping support for compatible detectors
- User updatable settings
- Requires Enabler Kit

CODE	DESCRIPTION
RGZDXULTRA	IntelliDOX Docking Station for BW Ultra
RGZDXBWC4	IntelliDOX Docking Station for BW Clip4
RGZDXMCLP	IntelliDOX Docking Station for GasAlertMicroClip

WORK WEAR

APPLICATION

When engineering and administrative control measures are unable to reduce exposure to hazards that may impact the torso of the body, employees should be supplied with, and wear effective workwear. This will include the ability to see a worker in all light conditions.

RISK ASSESSMENT

The process of carrying out a risk assessment should include a site survey that identifies workplace activities, lists the hazards present and assesses the level of risk that needs to be covered through the provision of protective clothing.

Determining the level of protection required should include which parts of the body require protection, the type of protection and with reference to appropriate standards should they exist.

Research should be carried out to identify products that provide the required level of protection and should be supported with appropriate documentation and product labelling. Specific attention should be given to the functionality of garments that are multi-layered or are worn in conjunction with other types of PPE.

Wearer trials are an important part of the evaluation process and obtaining wearer feedback is critical to ensure product suitability. Issues relating to sizing, ease of maintenance and durability are important factors.

HIGH VISIBILITY

AS/NZS 4602.1:2011 specifies garment parameters for high visibility clothing where high risk applications exist. These design requirements are structured around the needs of road and rail traffic workers. However, it is often recommended that workers in industrial workplaces with similar risk factors adopt this standard.

Specific garment design may vary depending on the workplace environment such as weather, type of work being undertaken and comfort considerations.

Garment Classifications:

The garments specified in this Standard are classified as follows:

- (a) Class D - A garment designed for daytime use.
- (b) Class N - A garment designed for night use using retroreflected light.
- (c) Class D/N - A garment designed for day and night use.

USEFUL REFERENCES

AS/NZS 4501 Set:2008 Occupational protective clothing Set.

AS/NZS 4602.1:2011 High visibility safety garments Part 1: Garments for high risk applications

AS/NZS 4399:1996 Sun protective clothing - Evaluation and classification.

SUN PROTECTION

AS/NZS 4399 sets out requirements for determining the rated ultraviolet protection factor of fabrics used for sun protection garments and other items of personal apparel (such as hats) which are worn in close proximity to the skin. It also specifies appropriate detailed labelling requirements.

Protection ratings:

- UPF 15, 20** Good Protection
- UPF 25, 30, 35** Very Good Protection
- UPF 40, 45, 50** Excellent Protection

Note: UPF ratings should not be confused with Sun Protection Factor (SPF) ratings which are not applicable to textiles.

SAFETY TIPS

- Ensure protective clothing is maintained with instructions to ensure optimum performance.
- Where possible select HI VIS colours that contrast to the prevailing background in the work area.
- Garments should be critically examined at 3-6 month intervals for damage, excessive fading, or the retroreflective material has ceased to be fit for purpose.
- Procedures covering the handling of contaminated clothing should be established eg. toxic chemicals & dusts.

All workers should be trained in the correct use and maintenance of personal protective equipment.

PROTECTIVE CLOTHING

APPLICATION

When engineering and administrative control measures are unable to reduce exposure to hazards that may impact any part of the body, employees should be supplied with, trained in the use of, and wear effective workwear and protective clothing.

RISK ASSESSMENT

The process of carrying out a risk assessment should include a site survey that identifies workplace activities, lists the hazards present and assesses the level of risk that needs to be covered through the provision of protective clothing.

Determining the level of protection required should include which parts of the body require protection, the type of protection and with reference to appropriate standards should they exist.

Research should be carried out to identify products that provide the required level of protection and should be supported with appropriate documentation and product labelling. Specific attention should be given to the functionality of garments that are multi-layered or are worn in conjunction with other types of PPE.

Wearer trials are an important part of the evaluation process and obtaining wearer feedback is critical to ensure product suitability. Issues relating to sizing, ease of maintenance and durability are important factors.

CHEMICAL & PARTICULATE PROTECTIVE CLOTHING

AS/NZS 4501.2 (EN ISO 13688) outlines general design considerations and specifies pictogram markings as per ISO 7000. Protective Clothing standards of relevance are:

SYMBOL	EN TYPE	TYPE DESCRIPTION
	Type 1 EN 943-1 EN 943-2	Gas Tight Protective Clothing Protective clothing against liquid & gaseous chemicals, aerosols and solid particulates.
	Type 2 EN 943-1	Non Gas Tight Protective Clothing Suits which retain positive pressure to prevent ingress of dusts, liquids & vapours.
	Type 3 EN 14605/(EN ISO17491-3)	Liquid Jet Protective Clothing Suits which can protect against strong and directional jets of liquid chemicals.
	Type 4 EN 14605/(EN ISO17491-4)	Liquid Spray Protective Clothing Suits which offer protection against saturation of liquid chemicals.
	Type 5 EN ISO 13982-1	Particle Protective Clothing Suits which provide protection to the full body against airborne and solid particulates.
	Type 6 EN 13034/(EN ISO17491-4)	Limited Liquid Splash Protective Clothing Suits which offer limited protection against a light spray of liquid chemicals.

SAFETY TIPS

- Include hands and feet in all protective clothing considerations.
- Ensure chemical protective clothing is matched to the specific chemicals in use.
- Ensure workers are aware of the capabilities and limitations of selected protective clothing.
- Critical protective clothing should be regularly checked for serviceability.
- Procedures covering the handling of contaminated clothing should be established eg. toxic chemicals & dusts.

All workers should be trained in the correct use and maintenance of personal protective apparel.

FLAME RETARDANT WORKWEAR

NFPA 70E 2015 is an international standard for 'Electrical Safety Requirements for Employee Workplaces'. NFPA 70E requires workers to wear flame resistant protective clothing wherever there is a possible exposure to electric arc flash.

Personal Protective Equipment (PPE) Ratings:

PPE Category	PPE (ATV Rating) Table 130.7 (C) (16)
1	Arc-Rated Clothing, Minimum ATPV of 4 cal/cm ²
2	Arc-Rated Clothing, Minimum ATPV of 8 cal/cm ²
3	Arc-Rated Clothing Selected so that the system Arc Rating Meets the Required Minimum ATPV of 25 cal/cm ²
4	Arc-Rated Clothing Selected so that the system Arc Rating Meets the Required Minimum ATPV of 40 cal/cm ²

CODE	DESCRIPTION	SIZES	UOM
CSLA5SLE35	Arax® Cut Resistant Sleeve	One Size	Pair

SAFETY FOOTWEAR

APPLICATION

AS/NZS 2210.1:2010 recommends that safety footwear should be worn to reduce foot injuries caused by contact with moving or falling objects, sharp materials that may penetrate through the sole or uppers, friction, contact with chemicals, heat, molten metals, slipping and electrical hazards.

RISK ASSESSMENT

A risk assessment identifying all possible foot hazards is essential before implementing a footwear protection programme. It is important to note that safety footwear can only provide a limited degree of protection against hazards in the workplace.

FOOTWEAR SELECTION ELEMENTS

SOLE	
Rubber	Heat resistant to 300°C
TPU	Heat resistant to 130°C - 140°C
PU	Heat resistant to 130°C - 140°C
PVC	Waterproof, oil/fat/acid resistant
TOE CAPS	
Steel	200 Joules/1500 Newtons
Composite	200 Joules/1500 Newtons
ELECTRICAL RESISTANCE	
Anti-static	Allows static electricity to earth
Conductive	Allows mains & static electricity to earth
Insulating	Protects against high voltage
OTHER	
Metatarsal Guard	Protects the metatarsal bones of the foot
Steel Midsole	Penetration resistant layer imbedded into the sole

Typical hazards may include:

- Slipping due to surface type & condition and wet or dry state (including type of liquid)
- Dropped or falling objects causing crushing or cutting injuries
- Moving plant and equipment causing crushing injuries
- Sharp objects with the potential to puncture or penetrate
- Exposure to extremes of temperature including welding and hot metal operations
- Chemical spills and other hazardous or toxic substances
- Unsafe electrical equipment
- Static electricity discharge can cause harm to workers and equipment
- Uneven terrain
- High levels of physical activity and duration of shifts causing foot soreness/discomfort

SAFETY TIPS

- Correct fitting is essential to comfort and good foot health.
- If orthotics, arch supports and other inserts are necessary ensure fitting considers these requirements.
- Fitting is best conducted whilst standing and later in the day to allow for working conditions.
- Keep footwear clean and well maintained to ensure effectiveness.
- Good quality socks assist with comfort and overall foot hygiene if replaced daily.

All workers should be trained in the correct use and maintenance of personal protective equipment.

HAND PROTECTION

APPLICATION

Many workplace tasks cannot be undertaken safely without some form of hand protection. In general, hand protection must be provided wherever there is residual hand injury risk after other control measures have been put in place.

RISK ASSESSMENT

The need for hand protection should be assessed by conducting an audit of potential workplace hazards. To ensure that the most appropriate glove is provided for the tasks and the environmental conditions, it is necessary to:

- identify the hazard(s) and the need for hand protection;
- identify the level of manual dexterity required;
- select suitable material to give the protection required;
- select a suitable style and a good fit;
- determine whether re-useable or disposable gloves are appropriate.

CHEMICAL RISKS

AS/NZS 2161.10.3:2005 and EN374.1:2016 apply to gloves that protect against chemicals and micro-organisms. The pictograms below signify that gloves so marked indicate:

TYPE 'C'
X - LOW CHEMICAL
Level 1 (>10mins) performance against at least 1 chemical

TYPE 'B'
X X X
Level 2 (>30mins) performance against at least 3 chemicals

TYPE 'A'
X X X X X X
Level 2 (>30mins) performance against at least 6 chemicals

A	METHANOL	J	N-HEPTANE
B	ACETONE	K	SODIUM HYDROXIDE 40%
C	ACETONITRILE	L	SULPHURIC ACID 96%
D	DICHLOROMETHANE	M	NITRIC ACID 65%
E	CARBON DISULPHIDE	N	ACETIC ACID 99%
F	TOLUENE	O	AMMONIA HYDROXIDE 25%
G	DIETHYLAMINE	P	HYDROGEN PEROXIDE 30%
H	TETRAHYDROFURANE	S	HYDROFLUORIC ACID 40%
I	ETHYL ACETATE	T	FORMALDEHYDE 37%

When dealing with glove performance against chemicals it is important to reference supplier glove compatibility charts for suitability and permeation & degradation time frames.

EN 388

XXXXXX

MECHANICAL RISKS

AS/NZS 2161.3/EN388 applies to gloves that protect against physical and mechanical hazards. Glove performance is indicated by the numbers below the pictogram for Abrasion, Cut-Coup, Tear, Puncture, Cut ISO13997 and Impact EN13594:2015.

Impact EN13594:2015: Pass or Fail

Cut ISO13997: Min A, Max F

Puncture: Min 0, Max 4

Tear: Min 0, Max 4

Cut - Coup: Min 0, Max 5

Abrasion: Min 0, Max 4

SAFETY TIPS

- Correct glove fit is essential to comfort and dexterity.
- Do not use gloves worn by others or where there is any uncertainty about prior chemical exposure.
- Consider the use of barrier creams before and after work - but never as the primary care.
- Cotton liners may assist in reducing moisture where prolonged use occurs.
- Extended cuff length may provide protection to the lower arm.
- Dispose of contaminated gloves appropriately.

All workers should be trained in the correct use and maintenance of personal protective equipment.

HEIGHT SAFETY

APPLICATION

The Australian workforce experiences a fatal fall from height at least once per week. Half of those fatalities are from heights under 2 metres; some even from as little as 600mm. Safework Australia specifies that height risk assessment is essential for ANY HEIGHT. Height Safety Awareness training is compulsory for all workers who inspect their own harnesses and safety equipment prior to any work at height.

RISK ASSESSMENT

Safework Australia (www.safeworkaustralia.gov.au) has Codes of Practice referencing working at height; included are Managing the Risk of Falls in the Workplace, Preventing Falls in Housing Construction and a Code of Practice for Confined Space. In the event that working at height hazards cannot be eliminated with controls other than personal protective equipment, then the

selection of specific fall prevention equipment, provision of rescue and retrieval equipment, and training to specific competencies must become part of the overall risk management process. Height Safety Training to a specified competency is now an integral part of any work at height undertaking - refer AS/NZS 1891.4:2009. Equipment inspections to manufacturer's requirements must be conducted by competent persons. A record of training and equipment inspection is the primary responsibility of the person conducting a business or undertaking. WHS Regulations detail the management of risk of a fall by a person from one level to another, including requirements to:

1. ensure, so far as is reasonably practicable, that any work involving the risk of a fall is carried out on the ground or on a solid construction
2. provide safe means of access to and exit from the workplace
3. minimise the risk of falls so far as is reasonably practicable by providing a fall prevention device, work positioning system or a fall arrest system.

Do Not Work Alone - A worker making their own connections can make a mistake and must never make their own D-ring connection with the harness already on - a fellow worker should check all connections relating to a harness.

Connector Compatibility - Mixing height safety components from a variety of manufacturers is not recommended, as components that may appear to be compatible may in practice not be. When

selecting systems the user should look to ensure that the hook and "D" are compatible wherever possible. Proper connector compatibility ensures that pressure can't be put on the gate of the connector by the ring you are connecting into i.e. anchor point or rear D.

Rescue - Rescue must always be integral with any fall protection programme.

Suspension Intolerance - This is thought to occur as a result of low blood pressure caused by blood pooling in the lower extremities as an after-effect of a full body harness fall.

SAFETY TIPS

- Consider the workspace below the height work i.e. the need for isolation, barriers and signs.
- Consider interaction with other trades and activities.
- Equipment should be inspected by the user before and after each use.
- Maintain equipment in accordance with the manufacturers' guidelines and AS/NZS 1891.4.
- Ensure the correct size harness is worn.

All workers should be trained in the correct use and maintenance of personal protective equipment.

Terminology

1. Work Positioning

A Work Positioning System is one that is designed to hold and sustain the worker at a location and limit the free fall to max. 600mm.

2. Restraint Technique

Control on a worker's movement by use of a fall-arrest system using an adjustable connection to an anchorage preventing movement to a position where free or limited free fall might be possible. Restrained Fall describes the same connections but where the worker maintains a restraint technique over varying distances from the anchorage.

3. Fall Arrest or Free Fall Arrest (FFA)

A system that is designed to stop the free fall of a worker and limit maximum arresting forces on the body to 6kN or less. A fall where the arrest forces begin to take loading in excess of 600mm. The maximum free fall distance is 2m. Limited Free Fall is where anchorage placement or lanyard length limits free fall to less than 600mm.

4. Rescue

A Rescue System designed to raise or lower a worker to safety in the event of an emergency. No free fall or risk to the rescuer should be possible.

5. Suspension

Designed to suspend and support the worker whilst raising or lowering and not allowing free fall.

6. Working Slack

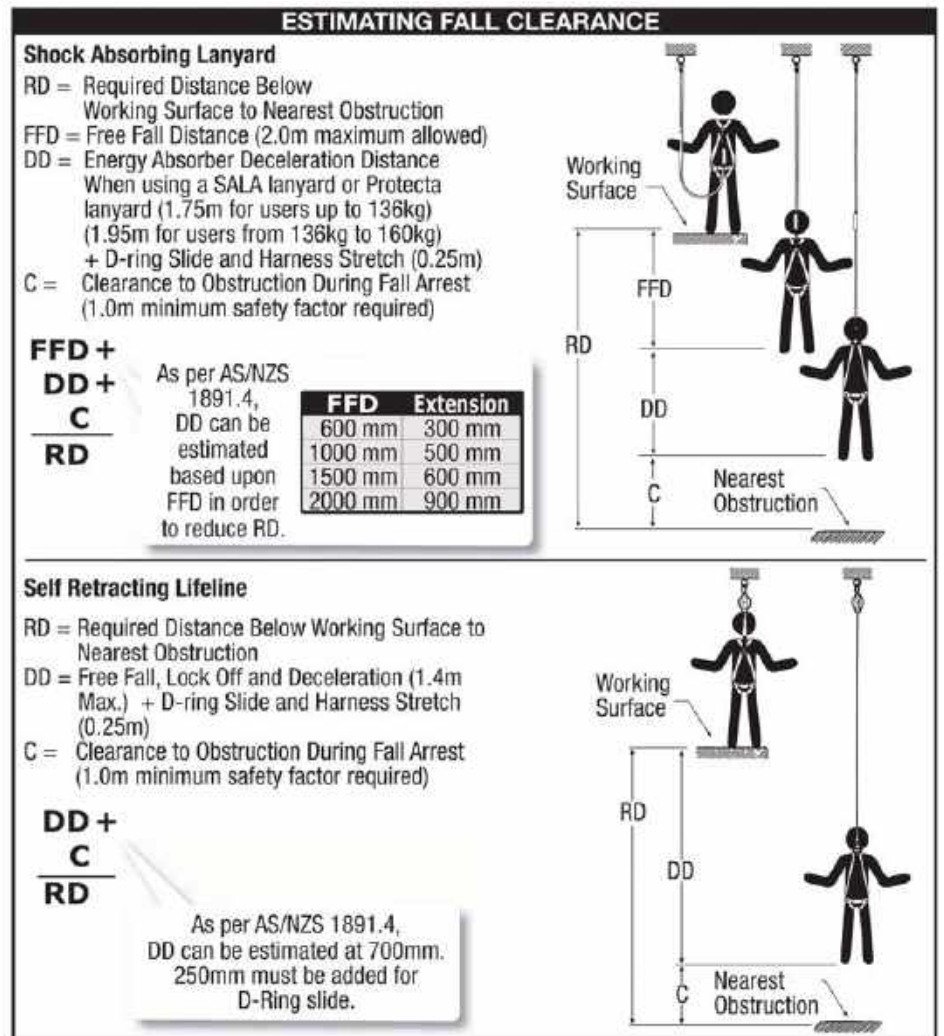

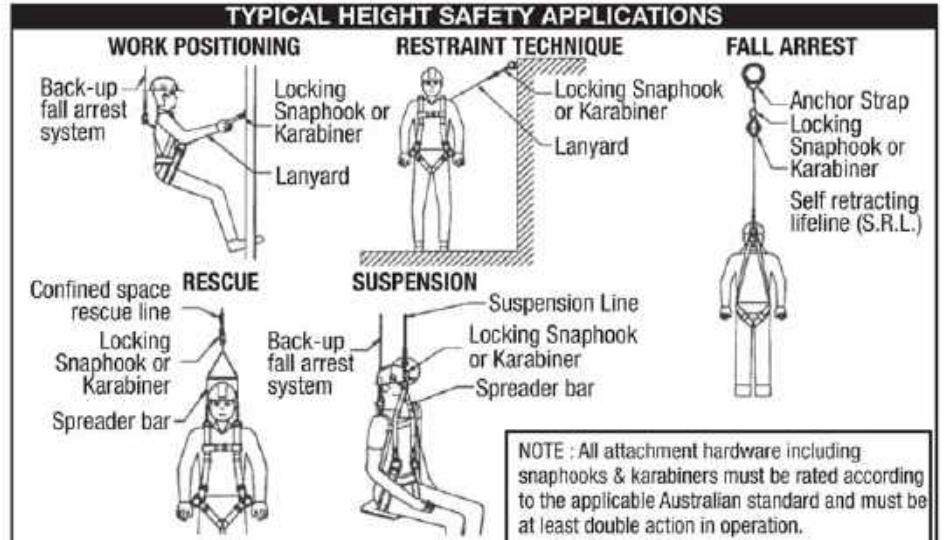

The lifeline distance from a harness attachment point to the anchorage point. Use an adjustable lanyard to limit working slack.

7. Weight Limitation

The weight of a worker including tools. 3M™ lanyards have been designed, tested and certified for a combined worker weight with tools to between 50kg and 160kg. Weight combinations above 160kg must use a rated Self Retracting Lanyard (SRL).

Note: There is no such thing as a safe fall distance.

Anchorage devices must be engineer approved and fitted by a trained specialist.

3M™ SAFETY TRAINING

Real World Training with the world's leading height safety company

- World-class training with the industry's best instructors
- Nationally recognised courses approved by ASQA
- Experienced training instructors with backgrounds that include rescue, fire and safety capabilities
- Anytime, anywhere. We will train your workers on-site or they can attend our fully equipped training facilities

Our Range Of Training Courses Include: ▶

Have more specific needs? 3M Safety training offers over 30 different height safety training courses, contact us for more information.

Height Safety Operator (Work Safely At Heights)

This course takes the participant through the theory of working at heights and also includes practical exercises and an introduction to peer rescue.

Height Safety Supervisor

Designed to provide candidates with the necessary skills to be competent as a Height Safety Supervisor as per AS/NZS 1891.4.

Height Safety Manager

Builds on the previous unit skill level of Height Safety Supervisor to consolidate all that is learned and to further develop these skills to Height Safety Manager level as per AS/NZS 1891.4.

Height Safety Equipment Inspector

Provides candidates with the knowledge and techniques to inspect and oversee the care and maintenance of their organisations fall protection equipment.

3M

D-Ring Attachment Points

- Creates instant attachment point allowing tools to be tethered safely
- Can be attached to virtually any tool using 3M Quick Wrap Tape
- Dual D-rings allow for 100% tool tie-off during tool transfers

CODE	DESCRIPTION	UOM
UDT1500003	D-Ring 13 x 57mm, 0.9kg Capacity	Pk/10
UDT1500007	D-Ring 25 x 89mm, 2.3kg Capacity	Pk/10

3M

Quick Wrap Tape

- Used with 3M D-rings and tool cinch attachments to create instant tethering points on virtually any tool
- Leaves no residue behind
- Inner fibreglass webbing increases the strength of the tape and makes the tape resistant to sharp objects

CODE	DESCRIPTION	UOM
UDT1500174	Quick Wrap Yellow Heavy Duty, 25.4mm Wide	2.7m Roll
UDT1500171	Quick Wrap Blue Heavy Duty, 25.4mm Wide	5.5m Roll

3M

Bungee Tether Tool Lanyards

- Designed to be used with most hand tools up to 4.5kg/15.9kg
- Features elasticated webbing and self-locking karabiners that prevents accidental opens and automatically close

CODE	DESCRIPTION	UOM
UDT1500047	0.8 - 1.2m Hook2Loop Bungee Tether, 4.5kg Capacity	Ea
UDT1500049	0.8 - 1.3m Hook2Loop Bungee Tether, 15.9kg Capacity	Ea

3M

Coil Tether Tool Lanyards

- Use from holsters, belts, harnesses, tool pouches and wristbands
- Lightweight and ultra compact
- Vinyl coated
- Designed to stay out of the way when not in use
- Compact hard hat coil tether allows for fast and easy tethering of hard hats

CODE	DESCRIPTION	UOM
UDT1500159	0.1 - 1.6m Hook2Hook Coil Tether, 2.3kg Capacity	Ea
UDT1500067	0.05 - 0.6m Trigger2Trigger Coil Tether, 2.3kg Capacity	Ea
UDT1500178	0.1 - 0.9m Hard Hat Tether, 0.9kg Capacity	Pk/10

3M

Tool Cinch Attachments

- Allows users to quickly secure even the most difficult to tether tools/equipment
- V-ring attachment point
- Stabilisation wings can be used to keep tool cinch attachments in place using 3M Quick Wrap Tape

CODE	DESCRIPTION	UOM
UDT1500013	V-ring Attachment - 1 Stabilisation Wing, 15.9kg Capacity	Ea

HEALTH & HYGIENE

APPLICATION

Health and Hygiene considerations apply to almost every workplace and cover a broad range of potential hazards. Workplaces should have a range of responses to their Health and Hygiene needs including both preventative and emergency response solutions.

RISK ASSESSMENT

The Safe Work Australia Code of Practice 'Managing the Work Environment & Facilities' provides guidelines that address typical issues relating to Health & Hygiene.

First Aid

First Aid kit selection should be based on a risk assessment of the type of work being carried out, the location and the number of workers (trained first aid officers may be necessary). The Safe Work Australia Code of Practice 'First Aid in the Workplace' provides practical guidance.

Hydration

Dehydration in the workplace can lead to safety issues as a result of reduced cognitive abilities, performance and reaction times. Strategies covering pre-shift, during and post-shift hydration should be considered. It is critical to ensure workers understand the various hydration strategies they can implement and are given the necessary tools to minimise dehydration.

Hand Cleaners

Hand washing facilities must be provided to enable workers to maintain good standards of personal hygiene and avoid work related skin complaints. Hand cleaners should be selected in response to the specific work environment and hazards.

The correct approach to hand cleaning is one that considers all aspects including pre work protection, using appropriate cleaners, use of antibacterial sanitisers and after work moisturising creams that help restore skin condition.

Sunscreens

Outdoor workers should have access to sunscreens to be used in conjunction with other sun protection strategies. Protection against solar ultraviolet (UV) exposure is critical given that in Australia two out of three people will develop some form of skin cancer during their lifetime. SPF50+ sunscreens with UVA and UVB broad spectrum coverage provide the best protection.

Defibrillators

Providing an automated external defibrillator can reduce the risk of fatality from cardiac arrest. It is a useful addition for workplaces where there is a risk of electrocution or where there are large numbers of members of the public. Automated external defibrillators are designed to be used by trained or untrained persons.

(Source: Safe Work Australia, First Aid in the Workplace, released July 2012)

Drug & Alcohol Testing

Alcohol and Drug testing programmes may play an active role in the prevention, detection and control of alcohol and illicit drugs use in the workplace.

Drug and Alcohol Policies are an essential component of managing workplace risks for many industries, especially for those with the highest risks of catastrophic industrial accidents. Programmes should be supported by clearly communicated policies and training, and adopt a consultative approach.

USEFUL REFERENCES

AS/NZS 2604.2012 Sunscreen products - Evaluation and classification.

AS 1223-1991 Industrial Hand Cleaners

Safe Work Australia Code of Practice "Managing the Work Environment & Facilities".

SAFETY TIPS

- Ensure First Aid kit contents are not 'out of date' and are restocked as soon as possible.
- When it comes to hydration don't rely on thirst as it is not a reliable indicator.
- The strongest hand cleaner is not always necessary – select the mildest possible cleaner possible.
- Sunscreen should be applied at least 15 minutes before sun exposure - and reapplied every two hours.

All workers should be trained in the correct use and maintenance of personal protective equipment.

First Aid Room Equipment

A first aid room should be established at the workplace if a risk assessment indicates that it would be difficult to administer appropriate first aid unless a first aid room is provided.

The contents of a first aid room should suit the hazards that are specific to the workplace. **Ask us for a first aid room checklist.**

SITE SAFETY

APPLICATION

Workplaces under the heading 'Site Safety' are bound by legislative requirements in the disciplines of traffic management, management of hazardous/flammable storage, fire protection, onsite electricity, gas/flammable fuels and water, machinery safety, height safety and environmental protection. This section has the necessary product range that will assist with the 'safe place of work' and 'safe system of work' obligations of statute law.

RISK ASSESSMENT

The Safe Work Australia Code of Practice 'Managing the Work Environment & Facilities' provides guidelines that address typical issues relating to Site Safety.

Signage

Safety signage is as essential element in any workplace. Signs are identified in categories - Mandatory, Prohibition, Danger, Warning, Emergency, Fire and general site safety signage. The Australian Standard AS 1319 sets out the requirements for the design and use of safety signs.

Traffic & Pedestrian Control

The movement of traffic in and around workplaces including road works warrants particular care due to the high risks involved. The Australian Standard AS 1743-2001 'Road Signs Specifications' provides details of layout, graphics, size and material requirements.

Spill Control & Flammable Storage

Workplaces must be prepared for the management & storage control of hazardous materials with the capacity to reduce the chance of a spill spreading or a fire being caused and/or becoming worse. AS 1940-2004 sets out the requirements and recommendations for the safe storage and handling of flammable liquids.

Lockout/Tagout

A Lockout/Tagout programme includes the use of specific devices and tags to prevent accidental activation of equipment during maintenance, installation or inspection. Each confined space entry should have its own set of written lockout procedures and be appropriately supervised.

Ladders & Platforms

Falling from ladders is the cause of at least half of all falls from height injuries. Do not use ladders in the workplace before first seeking education and advice then ensuring that all ladder users are educated and authorised. AS 1892 sets out the design requirements for portable ladders and sets out the minimum requirements for selection, safe use and care.

Emergency Eye Wash & Shower Equipment

When workers' bodies have the potential to be exposed to materials or chemicals which may cause injuries, access to

appropriate eyewash and shower equipment for emergency treatment should be available. AS 4775-2007 specifies minimum performance and use requirements for eyewash and shower equipment for the emergency treatment.

TBSPIL0T4WR	4-Way Receiver

Wall Mount Bracket

- Can be permanently fixed to any flat surface or to Multi-Post
- Twist-lok feature for quick attachment or removal of the Pilot unit

CODE	DESCRIPTION
TBSPIL0TWMB	Wall Mount Bracket
TBSPIL0TRC	Wall Mount Receiver

Magnetic Mount

- The strong magnet allows temporary placement of the Pilot unit on any steel surface
- Comes with a built-in safety bungy

CODE	DESCRIPTION
TBSPIL0TMMB	Magn.Mount Bracket
TBSPIL0TND	Magn.Mount Receiver

PILOT UNIT NOT INCLUDED

20kg Portable Post & Base

- For outdoor windy locations
- Cast iron base

6.8kg Hi-Line Post & Base

- 1m UPVC traffic post
- Rubber base

CODE	DESCRIPTION
TBSPIL0T20	20kg Portable Post & Base
TBSPIL0THLPCV	6.8kg Hi-Line Post & Base

Solar Powered Flashing Light

- Solar powered, no batteries required
- Off, Flash and Static modes

CODE	DESCRIPTION	COL.
TBSPIL0TLT	Solar Powered Flashing Light	Red, White

Sign Holder

- Compatible with all Pilot Twist-lok receivers
- Clear double-sided acrylic sign pocket

CODE	DESCRIPTION
TBSPIL0TA4	A4 Sign Holder
TBSPIL0TA5	A5 Sign Holder

Retracta-Belt System

Wall Mount

- For wall mount applications
- Belt is quickly deployed or released
- Complete with bracket and receiver clip

TBRWM76

Magna Mount

- Complete with magnetic receiver clip
- Designed for temporary placement - easily relocated
- Semi-permanent, magnetic fixed placement

TBRMM76

CODE	DESCRIPTION	COLOURS	UOM
TBRWM76	Retracta-Belt Wall Mount (1.2kgs) - 7.6m	Red/White, Black/Yellow, Red, Black, Yellow	Ea
TBRMM76	Retracta-Belt Magna Mount (1.5kgs) - 7.6m	Red/White, Black/Yellow	Ea

Port-a-guard Expandable Barrier

- 3.0m or 6.0m kits include freestanding and wall mounted configurations
- Suitable for indoor & outdoor use
- 990mm(H) with 400mm wide feet for increased stability
- Extruded aluminium post and slats with powder coated finish
- Wall receiver and sign brackets included

TBP300

CODE	DESCRIPTION	COLOURS	UOM
TBP300	Port-a-guard Barrier Kit (5.7kgs) - 3.0m	Red/White, Black/Yellow	Ea
TBP600	Port-a-guard Barrier Kit (9.8kgs) - 6.0m	Red/White, Black/Yellow	Ea

Portable Plastic Fence Barrier

- Low cost portable and stackable crowd control barrier
- Interlocking free-standing panels
- Durable polyethylene in HI VIS orange
- Black recycled rubber feet

CODE	DESCRIPTION	COLOURS	UOM
TBF2000	Portable Plastic Fence Barrier (13kgs) - 1.0m(H) x 2.0m(W)	Orange, Yellow	Ea

Mobile Expanding Barrier

- Lightweight and portable crowd control barrier
- Durable polyethylene construction in HI VIS yellow
- Castor wheels & locking straps for ease of handling
- Easy to set up and fold away

CODE	DESCRIPTION	UOM
TBEMTOBY	Expanding Mobile Barrier (16kgs) - 1.0m(H) x 4.0m(W)	Ea

Hazard Barricade Tape

- 50µ medium duty plastic tape
- 75mm wide
- 100 metre rolls

CODE	DESCRIPTION	UOM
ST75BYC	Yellow 'Caution'	100m Roll
ST75BRWD	Red/White Diagonal 'Danger'	100m Roll
ST75BRWDNE	Red/White Diagonal 'Danger Do Not Enter'	100m Roll

ST75BBW	Blue/White Diagonal	100m Roll
ST75BGW	Green/White Diagonal	100m Roll
ST75BRW	Red/White Diagonal	100m Roll
ST75BYB	Yellow/Black Diagonal	100m Roll

HI VIS Bunting Flags

- HI VIS orange PVC triangle flags
- Rectangular reflective yellow tabs for day/night use
- 45 flags over 30m length
- Reuseable high strength nylon rope

CODE	DESCRIPTION	UOM
TLINE5	HI VIS Orange Bunting Flags - 30m	Ea
TLINE4	HI VIS Orange Bunting Flags c/w Reflective Tabs - 30m	Ea

Barrier Safety Chain

- Manufactured from 8mm UV stabilised plastic
- Provides excellent visibility for both indoor and outdoor hazard areas
- Sold per metre or in roll lengths (25m)

CODE	DESCRIPTION	UOM
TCHAIN8	8mm Link Chain - Yellow	Per Metre or 25m Roll
TCHAIN9	8mm Link Chain - Red/White	Per Metre or 25m Roll

Road Safety Traffic Light

- High intensity double sided light
- UV stabilised high impact polyethylene case
- 18cm high impact polycarbonate lens
- Flashing (65FPM) or steady light mode
- Supplied with two 6V batteries and mounting bracket
- Automatic internal photo cell activation via manual key

CODE	DESCRIPTION	UOM
TRLSLY	Road Safety Traffic Light	Ea

Foxfire LED Range

- 26 super bright LEDs
- Magnetic back/pullout stand
- Magnifier on each LED
- Front and side illumination
- Modes: constant on, flash, side-to-side
- Other colours available to order
- Dimensions: H50mm x W100mm x L160mm
- Requires four AA batteries

CODE	DESCRIPTION	COLOURS	UOM
TLP263	Foxfire LED Signal Light	Red, Amber, Blue, Red/Blue, Red/White	Ea

LED Traffic Batons

- Heavy duty
- TLPB411 operates in torch only mode, baton only mode, or combination torch and baton
- TLPB412 operates in either flash or static mode
- Requires two D batteries

CODE	DESCRIPTION	COLOURS	UOM
TLPB411	LED Traffic Baton & Torch D42mm x L410mm	Red c/w White Torch	Ea
TLPB412	LED Traffic Baton D45mm x L550mm	Red	Ea

Portable LED Beacon

- Compact and portable 360° LED light
- 24 super bright LEDs
- Magnetic base
- Requires two D batteries (not included)
- Switch activated Day/Night function

CODE	DESCRIPTION	DIMENSIONS	COLOURS	UOM
TL24	Portable LED Beacon	121mm(H) x 104mm(D)	Amber	Ea

Small LED Vehicle Beacons

- Hardwire or Magnetic Base with power adaptor and 4 metre cord
- Programmable flash pattern - 6 LEDs
- 12-24 VDC operating voltage
- SABS IP66 rated - CE certified

TL1206

CODE	DESCRIPTION	DIMENSIONS	COLOURS	UOM

Vehicle Whip Aerials

- Sturdy fibreglass construction
- Quick release adapter and heavy duty spring mount
- HI VIS orange nylon mesh flag with silver reflective cross
- 1.8 and 2.4m versions are segmented for ease of storage

TLWAN18

CODE	DESCRIPTION	UOM
TLWAN12	1.2m Whip Aerial	Ea
TLWAN18	1.8m Whip Aerial in 2 Segments	Ea
TLWAN24	2.4m Whip Aerial in 2 Segments	Ea

Portable Warning Triangles

- Red reflective
- Side length 440mm
- Fold flat
- Set of 3 in sturdy hard case
- Complies with AS 3790:1992 and AS/NZS 1906.1:2007

CODE	DESCRIPTION	UOM
TLT3	Warning Triangles Set of 3	Set

Diamond Grade™ Reflective Vehicle Tape

- Highly reflective surface delivers high vehicle/object visibility
- Suitable for use on any hard surface areas including machinery, scaffolds and ladders
- Sealed edge prevents delamination
- Strong adhesive provides permanent bond to surfaces
- Meets AS 1906.2 Class 1A standards

CODE	DESCRIPTION	DIMENSIONS	COLOURS	UOM
STV983-13R15	Diamond Grade Vehicle Marking Tape	50mm x 15m	White, Yellow, Red	Roll

VIEWING/INSTALLATION GUIDE

Choosing the Appropriate Mirror

To determine the correct mirror size, simply follow these step by step instructions:

Step 1: Estimate the distance from the viewer to the proposed mirror location.

Step 2: Estimate the distance from the proposed mirror location to the area/object to be observed.

Step 3: Combine the previous distances. (Step 1 and Step 2). The total distance is your guide to the correct mirror size. Use the table shown to choose appropriate mirror size. If in doubt choose the larger size.

VIEWING DISTANCE GUIDE

Size of Mirror (diameter)	Best Distance
300mm	Up to 12 metres
450mm	Up to 15 metres
600mm	Up to 20 metres
760mm	Up to 25 metres
1000mm	Over 25 metres

Note: Viewing Distances are only a guideline and are recommended based on straight viewing. It is recommended to go up a size or two with multiple intersection or poor lighting areas.

SpillSmart

General Purpose Spill Kits

- Suitable for land based spills
- Absorbs water-based non-hazardous liquids: paints, coolants, hydrocarbons – including oils, fuels and grease
- Includes premium SpillSmart bioactive absorbents for rapid & effective clean up

DO NOT USE FOR AGGRESSIVE LIQUIDS & CHEMICALS

- Ideal solution for workshops and general work areas
- All kits supplied with nitrile gloves & instruction sheet

SpillSmart

General Purpose Bin Kits

- 120L or 240L yellow polyethylene bin options
- Heavy duty wheels

YSSB6060	SpillSmart Spill Bund - 6.0m x 3.0m	Ea

SpillSmart

Absorbents

All Purpose Absorbent

- Inert mineral based absorbent
- Safe for use on strong acid & alkaline solutions
- Suitable for petroleum, hydrocarbons, oils, solvents, sewage and protein-based fluids

Floor Sweep Absorbent

- Manufactured from organic cellulose materials
- Quickly absorbs petroleum, oils, fuels, solvents, cooking oils, sewage and protein-based fluids
- Not to be used on strong acid & alkaline solutions

HazSorb Absorbent

- Inert, non toxic vermiculite absorbent
- Effective for hazardous chemical spills
- Can be used for body fluid spills and typical hydrocarbon spills on land

Road Spill Absorbent

- Manufactured from organic cellulose materials
- Absorbs petroleum, oils, fuels, solvents, cooking oils, sewage and protein-based fluids
- Leaves paved surfaces dry significantly reducing the potential of slips
- Not to be used on strong acid & alkaline solutions

CODE	DESCRIPTION	UOM

BMP™ 21-PLUS Label Printer

- Perfect for organising your office, labelling electrical wires or datacomm cables, or even implementing a lean visual workplace
- Drop-lock-and-print materials
- Automatic label formatting
- Barcodes, serialisation and 104 symbols for electrical, safety and datacomm
- Print on materials up to 19.05mm wide
- Optional rechargeable Li-Ion battery (sold separately)

Use with:

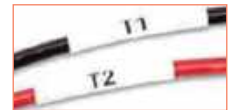

Self-Laminating Vinyl Tape (B-427)

- UI recognised and RoHS compliant
- Ideal for marking data and electrical cables

Permasleeve® Wire Marker Sleeve Tape (B-342)

- UI recognised and RoHS compliant
- Full circle, 3-to-1 ratio heat shrink sleeves - excellent for insulation purposes

(Other tape options available - please contact your nearest SafetyQuip store for further details)

CODE	DESCRIPTION	UOM
SA139535	BMP™ 21-PLUS Printer	Ea

BMP™ 71 Label Printer

- Create on demand labels for multiple applications from one printer
- The large full colour graphical screen allows you to preview your label before printing
- The BMP™ 71 label maker can print on more than 30 different types of label materials
- Able to customise labels up to 50mm high
- Rechargeable battery and AC power adaptor included
- Supplied with hardcase, 1 roll of die cut labels, 1 ribbon cartridge, USB cable, Quickstart Guide and printer driver CD

Use with:

Durasleeve® Wiremarking (B-390)

- Long lasting and durable marking of wires and cables
- Consists of two parts: the marker insert (that is printed upon) and the vinyl carrier which the marker is inserted into
- Available in white or yellow, 15mm or 30mm length

(Other tape options available - please contact your nearest SafetyQuip store for further details)

BAILEY

Ladderweld Access Platform - Temporary Work Platform

- Super strong 'fully welded' design fabricated from heavy duty aluminium
- Steel bracing under bottom tread and side bracing provides additional protection from impact damage
- Suited to 'high frequency' use, 170kg Industrial Rating
- 'Walk thru' design for stock picking and access to mezzanine floors, vehicle access and warehousing (no need to stock several products)
- Large 125mm wheels - improved portability and 'easy glide' action
- Large stable work platform (safe and stable) - 590mm x 800mm
- Manually operated braking system with HI VIS powder coated activation arm helps minimize unauthorised access
- Two safety gates fitted (a 2-in-1 product allowing for walk-thru access)

BAILEY Ladderweld MODULAR ACCESS SYSTEM

Modular Access Systems

Introducing the brand new Modular Access System that will revolutionise safe access to heights when used in conjunction with the Bailey Access Platforms. The modular components allow you to design and build an access platform that is customised to your needs.

- Modular system allows for unlimited types of configurations
- Fully welded frames and platforms with integrated toe boards
- Hand rails can be easily removed/repositioned to allow clear access to the work space
- Lockable castors allow easy repositioning of the system
- 170kg load rating per bay - Industrial duty - safe to use on a work site
- Meets standard AS 1892

1m bridge configuration

THE SAFETYQUIP RISK INDEX

SafetyQuip has created a risk index for nationally ranged products. These products have been classified with a letter and a number as per the table below. The risk index code and commentary for these products will be highlighted on each invoice.

RISK	USE RISK	SOURCE AVAILABLE INFORMATION	CONSIDERATION OF ALL APPLICATION FACTS NECESSARY	WARNING NOTES MAY APPLY	SEEK ADVICE FOR TOTAL PROTECTION	DO NOT USE WITHOUT TRAINING & KNOWLEDGE
E	MINIMAL	1	1	2	2	3
D	POSSIBLE	1	1	2	3	4
C	MODERATE	1	2	3	4	4
B	HIGH	2	3	4	4	5
A	VERY HIGH	3	4	4	5	5

RISK MANAGEMENT

Control of risk is central to working safely with hazardous substances and workplace applications.

The steps in a risk assessment system are:

1. Identify the hazard.
2. Analyse how and why the hazard could occur.
3. Analyse the consequence of the hazard.
4. Consider the likelihood of the hazard and estimate the risk.
5. Judge risk acceptability using a matrix or tie line system to calculate a risk score.
6. Decide upon and select risk controls.
7. Monitor the risk controls put in place.

DISCLAIMER: The information detailed above is not provided as a solution to the control of workplace hazards. It is an outline and has not been prepared as any statement of law nor is it intended to replace or substitute for professional and/or legal advice which is strongly recommended.

Support for the Community

SafetyQuip has been a proud supporter of the **Australian Men's Shed Association (AMSA)** since 2011 when \$5000 was donated to AMSA for the development of an operations manual for local Men's Sheds. In the same year SafetyQuip also supported AMSA by serving as a sponsor and trade exhibitor at the 4th National Men's Shed Conference in Brisbane.

Men's Sheds are community-based, non-profit, non-commercial organizations that are accessible to all men and whose primary activity is the provision of a safe and friendly environment where men are able to work on meaningful projects at their own pace in their own time in the company of other men. A major objective is to advance the well-being and health of their male members.

The AMSA through the Men's Shed movement continues to develop initiatives and programs that address men's health and wellbeing from the perspective that many Aussie men are not very good at looking after themselves physically or emotionally.

To help to address this situation the Australian Men's Shed Association has put together a men friendly health screening and information project called **"Spanner in the Works?"**. The program has the following main aims:

- Provide some basic health screening and advice to men, utilising the staff resources of the local health service within the "men friendly" environment of the Men's Shed
- Referral on of men to health professionals (as appropriate)
- Provide "men friendly" health information and health awareness through the "Spanner in the Works?" booklet
- Have local men and shedders engage with their local health service providers
- Have local men (non 'shedders') engage with their local Men's Shed
- Have local health service providers and local Men's Shed engage with each other

In recognising the potential of the "Spanner in the Works" program to have a real impact on men's health issues, SafetyQuip provided a \$10,000 sponsorship to assist in promoting the program to all Men's Sheds throughout Australia. Ask for a copy of the **pocket guide** or visit the AMSA website **www.mensshed.org**

SafetyQuip is honoured to support the vital community work undertaken by the Australian Men's Shed Association.

'Spanner in the Works?' pocket guide ►

Are You Man Enough?

Breast cancer doesn't strike only women. Cancer Australia estimates that in 2019, 19,000+ women and 164 men will be diagnosed, and that the disease will claim the lives of 3,000+ women and 32 men.

Bisley and SafetyQuip are taking a stand in the fight against breast cancer.

Bisley has created a special 'Real Men Wear Pink' range of workwear and will donate \$3 from the sale of each promotional garment with the aim of raising \$2million research dollars focusing on breast cancer prevention. SafetyQuip is proud to be a part of this effort by offering the following 'Real Men Wear Pink' range in our catalogue. Both mens and ladies styles are available.

*Garments come complete with NBCF embroidery on sleeve

Product Code	Description	Page
WBS6896TP	Mens Taped Two-Tone Shirt*	40
WBS6696TP	Mens Taped Two-Tone Shirt*	40
WBSL6896TP	Ladies Taped Two-Tone Shirt*	47

To find out more about how you can be a part of this life-saving effort in the fight against breast cancer, visit nbcf.org.au/real-men-wear-pink.
