

# Know your hazard: **Powder Coatings**

## What are powder coatings?

Powder coats are mixtures of pigments, resins, curing agents and other additives.

The powders are sprayed with a gun, which imparts a charge upon the particles.

### What are the sources of exposure to powder coating?

Workers can be exposed to toxins in powder coatings during:

Manual spray applications

D o

Handling and dispensing powders

Pigments

Resins

Other

additives

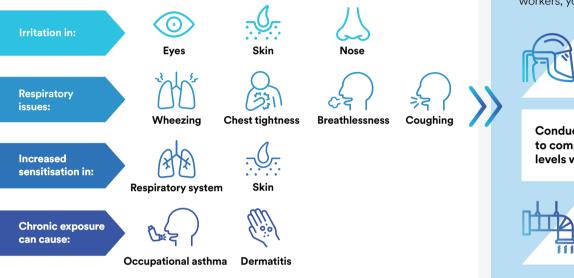

0

**Cleaning paint** booths

Maintaining spray equipment

### Harmful effects of powder coating

Powder coating powders generally have low solvent content compared to liquid-based paints and are often classified as having low toxicity. However, some powder coats can have pigments and hardeners that can pose health risks such as:

#### In order to reduce exposure and risks to workers, you can:

protect against it?

How can one

0

Curing

agents

**Powder coatings** 

**Get Respiratory Protective Equipment** (RPE).

```
Conduct risk assessment
to compare exposure
levels with limits.
```

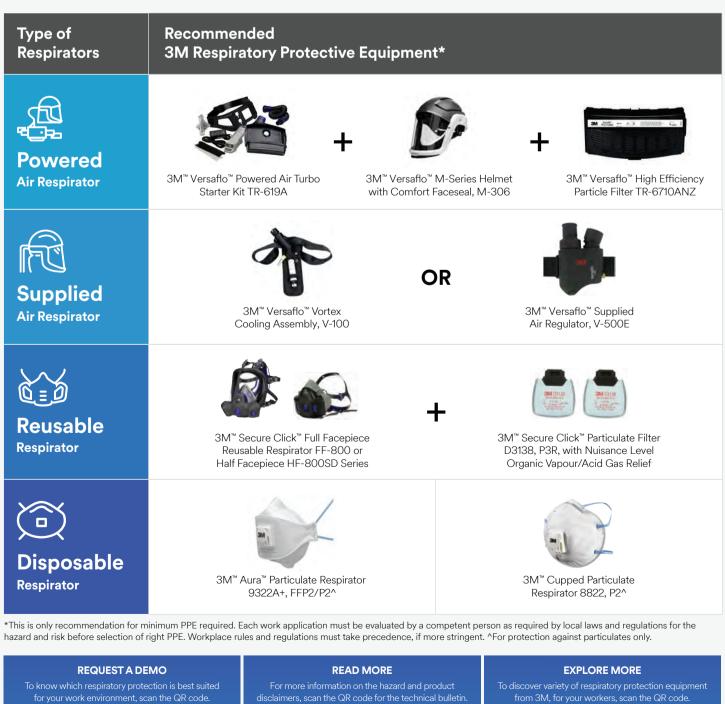

Implement engineering controls such as local exhaust ventilation (LEV).

# What RPE does 3M recommend for protection against powder coating?

3M has a range of RPE that can help reduce your exposure to dusts, mists, metal fume, as well as gases and vapours commonly encountered in metal production and fabrication.
