Comfort and Protection

Liquid Protection Type 6 (EN 13034). Whole suit reduced spray test (EN ISO 17491-4:2008)*

Dust Protection Type 5 (EN ISO 13982-1:2004). Inward Leakage results:
 $L_{pm,0.2/90} < 30\%$; $L_{s,0/10} < 15\%$.

Anti-static Anti-static coating on both sides (EN 1149-1:2006/ EN 1149-5:2008)**

Nuclear Radioactive particulates (EN 1073-2:2002), Class 1***. Does not offer protection against radiation.

* In the whole suit test, liquid spray is applied to the subject for 1 minute. During this time the subject moves gently and is rotated through 360°. A total of 1.88 liters is sprayed from four nozzles. The clothing is allowed to drain for 2 minutes and then the absorbent coverall is inspected for stains which are compared to a calibration stain. Requirement: Passes when the stained area inside is smaller than 3 times the calibration stain area.

** All apparel must be suitably grounded for anti-static treatment to be effective. Electrostatic propensity may decrease with wearing time and/or severe conditions.

*** Except puncture resistance.

Typical Applications

Typical applications may include asbestos inspection, coal dust in power plants, metal polishing, light-duty building cleaning, machine or vehicle maintenance, paint spraying, pharmaceutical, general industrial clean-up, insulation installation, general powder handling and food processing.

In all cases a risk assessment should be carried out. Users must be trained and have read all *User Instructions*. Use limitations and performance data should be considered to ascertain the protection required. If in doubt, contact a safety professional.

*** The European Standard EN ISO 6530 measures liquid penetration through a fabric and liquid repellency by a fabric. The test simulates exposure to small amounts of chemicals (10 ml) for 1 minute duration only. The penetration index refers to the percentage of the original quantity which penetrates the fabric within 1 minute (in a detector beaker) as a percentage of the original quantity.
