

SpillSmart Polypropylene Floating Booms have been designed to contain and absorb oils, oil-based fluids and fuel spills on water, whilst creating a floating barrier. By creating a floating barrier for containing the spill, sensitive and vulnerable habitats stand a greater chance of protection with greater recovery results.

The hydrophobic polypropylene filling is highly absorbent and highly buoyant. These booms will remain afloat even when fully saturated without leaching absorbed liquids back into the environment. The booms are secured together to create the desired length by utilising the clips without a need for ropes. 25mm webbing combined with premium shade cloth provides unrivalled structural strength ensuring the integrity of the booms will remain intact for longer-term deployments.

### Designed for:

- Containing and absorbing oils, oil-based fluids and fuel spills on water, whilst creating a floating barrier.

### Features:

- **Heavy Duty premium strength UV treated outer skin:** Provides superior protection during deployment & recovery against oyster shells, branches, rocks and debris.
- **High strength joining clips & Webbing:** Provides the ability to create desired lengths on site. Once joined, the clips and 25mm webbing combination withstand high amounts of stress under load and remove the need for the use of infallible rope.
- **Industrial Stitching strength:** Provides durability and strength when being pushed to the limits ensuring the stitching will not let go.
- **Quality Polypropylene absorbent filling:** Highly absorbent hydrophobic floating inner will not leach absorbed hydrocarbons, fuels and oils remaining buoyant during longer deployments.

ES-PBSS-125-3

Polypropylene Oil Only Boom 125mm x 3m

ES-PBSS-200-3

Polypropylene Oil Only Boom 200mm x 3m

NOTE: 6m lengths available on request
